
Lawrence Livermore National Laboratory

A world-renowned research and development center serving as a national resource in applied science and engineering to meet America's needs.

Livermore is one of the largest research institutions in the world. Its prized staff of some 7,000 employees includes more than 2,500 scientists and engineers and 2,500 craftspeople and technicians. With a replacement value in excess of about \$5 billion, the Laboratory's research complex includes world-class lasers, supercomputers, accelerators, and literally hundreds of laboratories and test facilities.

Laboratory leaders know that the future security of the nation will depend as much on

economic strength as on national defense. Livermore is in partnership with American industry to bring the Laboratory's technological breakthroughs to the marketplace. The goal of these partnerships is to spur domestic economic growth and enhance the nation's economic competitiveness.

A recent technology transfer tool, the Cooperative Research and Development Agreement (CRADA), is facilitating American industry access to the Laboratory's breakthrough technologies, materials, and state-of-the-art facilities. The Laboratory has signed nearly 100 CRADAs with its industrial partners, with a value of approximately \$300 million.
